EchoSphere

Your voice shapes the story’s atmosphere.

An audio-first narrative experiment.

AMD
Developer Cloud

Gemma
Open model

Evolus
Agent + API

VOICE → ATMOSPHERE → STORY

For the people who bring stories to life.

01

Immersive studios

Create responsive worlds for interactive entertainment.

02

Museums & venues

Turn a visit into a story the audience can influence.

03

Audio-first audiences

Explore through voice, with text and keyboard alternatives.

CREATORS / POTENTIAL CUSTOMERS

PARTICIPANTS

Proposed model: creator or venue subscription.

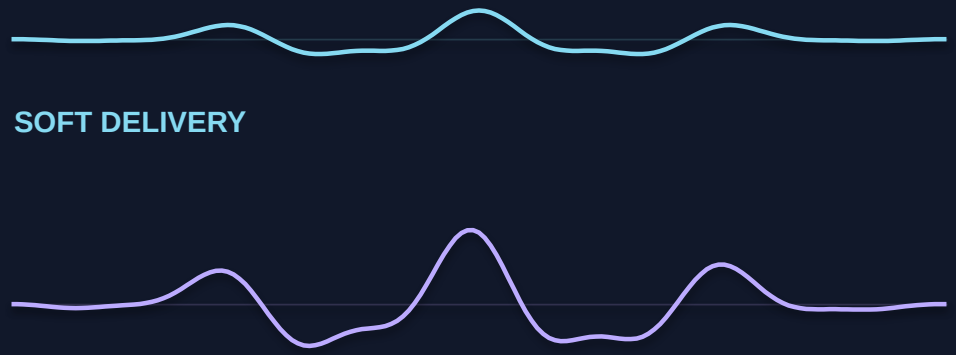

A voice carries more than words.

A transcript loses softness, pauses and intensity.

Waiting for a full turn can leave the world unresponsive while we speak.

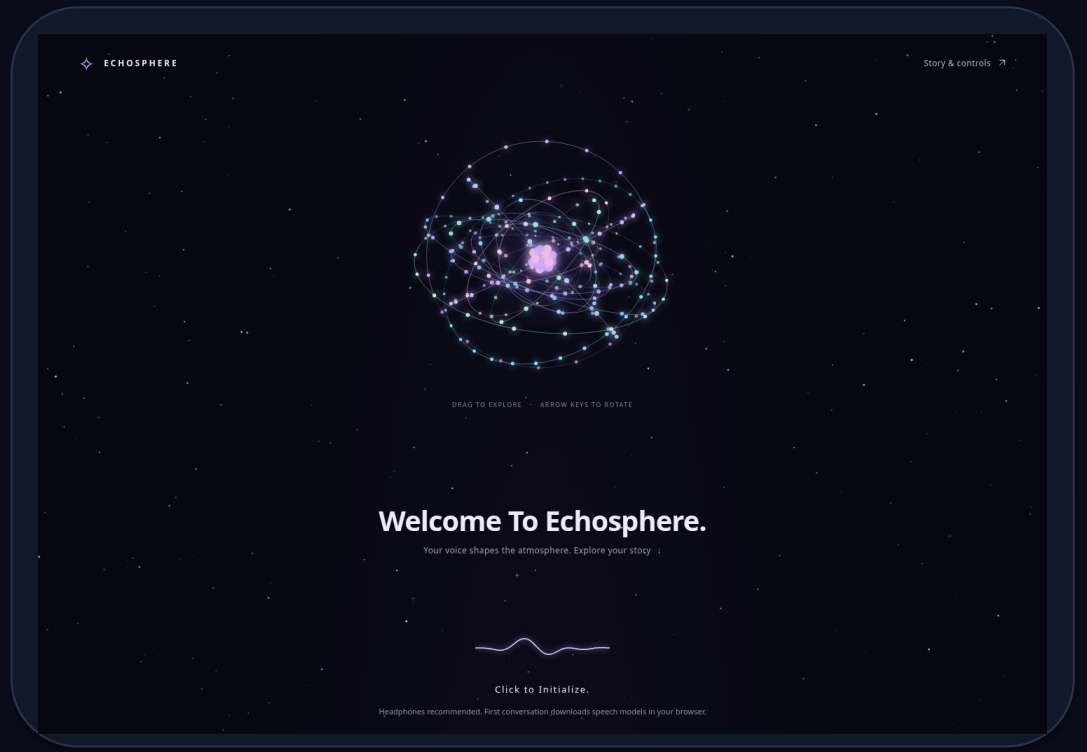

SAME WORDS

“I’m here.”

Delivery is an acoustic cue, not a diagnosis of emotion.

Words move the plot.
Your delivery shapes the world.

01 As you speak

50 ms audio frames shape the atom, waveform and ambient sound locally.

02 As the story develops

A guide leads, responds and can be interrupted.
Story cues direct a spatial voice.

16 orbits · Voice + text input · Automatic scene placement

AMD runs the narrative.
The browser shapes the moment.

AMD

DEVELOPER CLOUD

GPU compute for narrative inference.

Gemma

CONFIGURED: GEMMA 4 · 31B IT

Generates story language from input and context.

Evolus

AGENT + API

Connects the app to the configured model.

REQUEST PATH — **Browser → Secure backend → Evolus → Gemma on AMD**

LOCAL AUDIO — Whisper: words in · Kokoro: voice out · Web Audio: spatial sound

Turn listening into participation.

QUIET DISCOVERY

“Please stay beside me and speak softly.”

Guide close by
0.65 m placement preset

DISTANT ENCOUNTER

“Let a distant voice answer from the right.”

Voice from the far right
7 m / 55° placement preset

Real Evolus text responses + local placement decisions · Typed-input comparison

54 automated tests pass

Next validation: speech models + public HTTPS voice demo
